

May 29th., 2011 (Forecast for May 31st. Balloonsat "Virtual Flight Days" Flight)

Weather is still looking good

I've added in High altitude winds (<20 mb, ) from today's 8AM Detroit sounding. It's a guess at what the upper winds will be doing!

The flight path looks like 15-20 miles, still short

And the humidity suggests no/few clouds

Surface winds 6 knt, Surface Temp 28.5, Dew point 23.2 warm & muggy

Launch from Upper Sandusky on 31 May

To 86 kft @ 1000 ft/min: 25 miles @ 68

To 100 kft @ 1000 ft/min: 20 miles @ 67

Landing somewhere between Chatfield, OH and Attica, OH.
